

AUTOMATIC REVERSING CONTROLS

MASTER'S AUTOMATIC REVERSING CONTROLS ASSURE 'DOUBLE LIFE' FOR THE DISPOSER'S WEARING PARTS, CORRECT MACHINE OPERATION AND MINIMUM INSTALLATION COST.

MASTER'S Automatic Reversing Controls double the life of the wearing parts in the disposer, as each time the disposer is started it runs in the opposite direction, which also reduces the main cause of jams.

All control components are wired in the proper sequence assuring the correct operation of the disposer, and minimizing installation time and cost.

MASTER'S CCRM and CCRM-S control panels include a line disconnect which can be locked in the off position and provides a dead box when the door is open.

The control timer is adjustable from 0 to 5 minutes. It helps

to eliminate drainline clogging caused by careless or improper disposer operation. Residual build-up in the drainline results from failure to provide a 2 to 4 minute afterrun, the motor also continues running in the MODEL CCRM and CCRM-S which assures a clean odor-free disposer.

A magnetic contactor assures low voltage protection for the motor and prevents the disposer from restarting if there is a power interruption.

Available for all horsepower, voltages, and phases.
